

Ukrainian suppliers unite

Kyiv, Ukraine, January 12, 2023. Enamine Ltd., the world's leading supplier of screening compound libraries and building blocks, and UORSY, a top Ukrainian chemical company producing products for the early phase drug discovery, announced today the creation of a joint "Legacy" screening collection.

The war in Ukraine made an immediate impact on the drug discovery supply chain. Many global suppliers of screening libraries and building blocks, including the world's largest – Enamine, originate from Ukraine. The sudden and abrupt cut in supplies on February 24 showed a high level of the problem.

Enamine acted quickly. Soon after the Russian offensive, the supplier could promptly resume its operations in Kyiv, having established its own ground transportation replacing the missing couriers' service. It takes no more than 3 days for Enamine to bring its products from Kyiv to its logistics office in Latvia, EU. The Enamine's screening collection, counting over 3 million neat samples, was entirely transferred from Kyiv to a safer location in the west of Ukraine.

The companies have been actively collaborating for [more than ten years](#) in co-marketing UORSY building blocks. Enamine has proved a reliable and efficient partner for UORSY providing its developed sales channels and optimized logistics. Today, both Ukrainian suppliers decided to unite their forces, facing the war in their country, and create a joint collection of screening compounds, which they will market and sell together. This new collection is called "Legacy" to underline the enormous scientific heritage of the Ukrainian suppliers. The collection will feature 1.22 million geographically diverse compounds collected from different academic projects in Ukraine, many remaining significantly underexplored. The Legacy collection replaces the stock collection of UORSY (680 thousand compounds) and is also available now within Enamine's [suite of screening collections](#) and through [Chemspace](#) to make UORSY compounds most accessible to the global drug discovery community.

Vladimir Ivanov, Chief Sales and Marketing Officer at Enamine commented: "We are pleased to partner with UORSY. Their collection has formed an essential part of our joint Legacy Collection, featuring the diversity of screening compounds developed in Ukrainian research institutions. These compounds will be available for searches at EnamineStore.com and will be delivered along with Enamine original compounds in the same format and with the same support level."

ENDS

About Enamine

<https://enamine.net/>

Enamine is a global leading designer and the largest producer of building blocks (284,000+ in stock) and screening libraries (3M+ compounds in stock). Enamine provides services in advanced organic synthesis, library synthesis, and medicinal chemistry. In 2011 Enamine established a pre-clinical service unit including ADME, *in-vivo* PK studies, and High Throughput Screening under the brand name "Bienta", allowing the company to tackle since that time fully integrated or à-la-carte research programs.

About UORSY

<https://uorsy.com/>

UORSY is a leading Ukrainian chemical company founded in 2001. It conducts research in organic synthesis with the aim of developing novel chemical compounds for the needs of drug discovery. The company has built a large database of tangible (make-on-demand) building blocks in collaboration with Enamine which it distributes through [Chemspace](#).
